## About This Software

RPG in a Box lets you easily create 3D grid-based, voxel-style RPGs and adventure games! As its name suggests, it will contain every tool necessary for turning your ideas into games, all packaged together "in a box". The software is designed with a beginner-friendly approach as to not require any programming or modelling knowledge while still providing a wide range of customization and openness.

Please be aware that **RPG in a Box** is still in alpha and many of the planned features are yet to be implemented! Before

purchasing Early Access, please try out the free upcoming demo to get a feel for the current state of the engine.

## **Voxel Editor**

Build tiles, objects, and characters from 3D pixel blocks (i.e. voxels) and easily animate them with the editor's frame-based/stop-motion animation system. Importing from MagicaVoxel (.vox) or PNG sprites is also supported.

## **Map Editor**

Create grid-based worlds with the tiles you've built, then bring them to life by adding interactive NPCs and objects using the editor's intuitive navigation and interaction system.

## **Scripting**

Set up and trigger in-game events with the visual, node-based script editor. Simply drag and drop the desired actions (no programming knowledge required), or manually code "quick scripts" using the custom, Lua-like scripting language.

## **Dialogue**

Write conversations for your NPCs using a visual, flowchart approach similar to that of the script editor. Branching dialogue is supported via player choices and condition checking.

## **Camera System**

Choose from three available camera types for your game: standard, first-person, and top-down. Stage dynamic cutscenes using the engine's flexible camera scripting system.

## **UI Customization**

Design one or more dialogue box themes and customize the appearance of many other interface elements such as the inventory, main menu, and credits roll.

## **Basic Items**

Define basic items for the player to find in containers or earn through the completion of tasks. Attach scripts to trigger effects for potions and other consumable items.

## **Sound FX Generator**

Generate fun, retro-style sound effects using the built-in tool based on Dr. Petter's SFXR.
